

Colored Cements for Masonry

Make an Impact with Colored Mortar

Your selection of colored mortar can make a vivid impact on the look of your building. Mortar joints comprise an average of 20 percent of a brick wall's total surface. Your selection of i.design flamingo-BRIXMENT can dramatically enhance this surface with an eye-catching spectrum of color choices.

Masonry Products that Endure the Test of Time

i.design flamingo-BRIXMENT color masonry cements are manufactured to the most exacting standards in our industry and uniquely formulated to provide strength, stability and color fastness to endure for generations. Our products are manufactured with the highest-quality iron oxide pigments, which provide consistent color quality throughout the life of the structure. All products are manufactured to meet the appropriate ASTM specifications.

Strong on Service

i.design flamingo-BRIXMENT products are distributed by a network of dealers and backed by regional Customer Support Teams. Essroc Customers also enjoy 24/7 service through www.MyEssroc.com. This Essroc e-business center provides secure, instant communication on account information, technical documents, deliveries, personalized sales and technical support.

Continuing Education Provider

Essroc encourages continuing education for architects and is a registered Continuing Education Provider of the American Institute of Architects.

First in Portland Cement
First in Masonry Cement
First in Colored Masonry Cement

Essroc recommends constructing a sample panel prior to construction and/or placing an order for color. Field conditions and sand will affect the finished color.
